

AGEJET AFTER CARE

Immediate:

- **The treated area may feel warm, like a sunburn, for several hours, and will appear pink to red in color.**
- **Before leaving the office, we will apply a thin layer of HA serum to help moisturize your skin.**
- **You can wash the treated area with lukewarm water and a gentle cleanser, softly patting dry. Avoid hot water on the area for 72 hours.**
- **Hydrate and protect your skin from sun exposure with moisturizer and SPF 30+ post treatment, daily.**
- **Keep drinking water!**

24-72 hours:

- **Apply HA serum to the treated area 3-4 times per day for 5 days post treatment.**
- **If you have dry skin or your skin is not well hydrated before treatment, you may have some dry patches or light flaking afterward. If this does occur, just add additional moisturizer to the area. Do not pick at your skin!**
- **Avoid excessive exercise, sweating, hot baths or showers, and saunas (i.e. activities that add more heat into your skin).**
- **You may resume normal skincare 72 hours post treatment.**
- **Continue drinking water!**
